

From Win generation to Steel Projects PLM

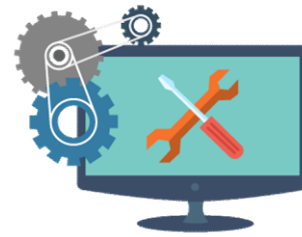

In 2012, we launched our new software called Steel Projects PLM, which came after the software generation 'Win'. This change represents many advantages for users, including (among many others!):

Performance

- New formats to import (XML Tekla, IFC...)
- Revision management
- Part checking and validation
- Management of priorities (projects, stocks...)
- Multi-sites management
- Improved section nesting
- Integrated plate nesting
- Traceability management (EN1090)
- Advanced workflow
- Workstation management
- Production time forecast
- Fabrication job management
- Advanced production feedback and analysis

User Experience

- New user interface / New design
- Single interface centralizing all the modules
- Compatibility with Microsoft Remote Desktop and Citrix architecture
- Microsoft SQL Server database
- User right management
- Automatic updates

→ Steel Projects PLM is an evolutive solution under continuous development. Thanks to our SMART Program (service agreement), you can always have its latest version, designed according to your needs and requests.
